

The GO2 Sure-Fire Big Night Out Strategy:

1. Whether you intend to drink alcohol or not, try taking 10mL of GO2 Oxygen beforehand so you'll have the energy and stamina to enjoy a great night. For best preparation, take two H2 BOOM molecular hydrogen tablets in a large glass of water at least 15 minutes before or after taking GO2 Oxygen.

2. If you've had a lot to drink take about 20ml of GO2 Oxygen in water last thing before bed. This allows GO2 to get to work while you sleep and help cleanse the alcohol from your body.

3. Treat yourself to another 10-20ml shot of GO2 Oxygen in the morning. Follow up with 2 H2 BOOM tablets half an hour later to finish the job.

If you forget to do the overnight strategy, in the morning try 30mL of GO2 Oxygen in water or a couple of 20mL servings at half hour intervals followed by 2 H2 BOOM tablets which will help get you back on track!

Note 1: Whilst this information is for your guidance, you may need to adjust this strategy to suit your needs - everyone is different, and of course you don't drink the same amount of alcohol every time you drink.

Note 2: If you only have either GO2 Oxygen or H2 BOOM available, whichever one you have will still be very beneficial if used as above. However they complement each other brilliantly when used as a team to maximise speedy effectiveness.

Note 3: Be sure to drink plenty of water in conjunction with this strategy.

Disclaimer: We do NOT claim that our products will make you fit to drive. As always, it is every driver's personal responsibility to ensure they are within the legal blood alcohol limit before driving.

Tip for Wine Drinkers:

Many people experience an adverse reaction to the sulphides contained in most wines. You can neutralise the sulphides by adding 2-3mL of GO2 to a bottle of wine and waiting 5 minutes before pouring. Then ... just Enjoy!
